

STEAM FLAKED/ROLLED GRAINS

FOR CATTLE, SHEEP, GOATS, HOGS AND HORSES

Steam flaked/rolled grains are an excellent source of supplemental energy for many livestock. Steam flaking grain is a process that involves steaming the grain prior to rolling it into a flake. This process ensures that the maximal energy yield is obtained from the grains.

OUR PROCESS

STEAMED

The grain is “cooked” in a chamber for 45 minutes with steam to gelatinize the starch (melting of starch crystals)

ROLLED

The “cooked” grain is rolled through a corrugated flaker which further increase starch availability

COOLED

Lastly, the steam and heat are removed from the grain as it slowly passes through a larger cooler

PRODUCTS AVAILABLE

COB | Corn, oats, and barley with molasses (*pictured*)

MIXED ROLLED | Oats and barley with molasses

ROLLED BARLEY | With molasses

ROLLED CORN

ROLLED OATS | With molasses

STEAM FLAKING BENEFITS

- The “cooking” processes increases starch availability of grain significantly compared to ground and dry rolled products
- Improved starch digestibility allows to more energy to be utilized by the animal for growth and performance
- In horses, because the starch is gelatinized, it reduces the risk of digestive upset caused by hindgut fermentation

* Rolled grains are intended to be used as supplemental energy for livestock. Rolled grains are not intended to replace complete feeds. Please consult one of our nutritionists.

PRODUCTS NUMBERS

COB PRODUCT # 78465

MIXED ROLLED PRODUCT #78021

ROLLED BARLEY PRODUCT #78201

ROLLED CORN PRODUCT #78461

ROLLED OATS PRODUCT #78081

 **Sure crop feeds**

NET WEIGHT OF ALL PRODUCTS 20KG
